

THE APPLICATION OF NUTRITION LEUKEMIA TWICE AND BONE MARROW TRANSPLANT

“Dear Peter,

I am writing to thank you for your help with my daughters, especially my youngest.

After having Leukemia twice, and a bone marrow transplant and enduring years of chemotherapy and Total Body Radiotherapy, she was left drained and didn't have the energy levels of fellow teenagers. After one activity, she would be left tired and that would be all she could manage for the day even though it's been 3.5 years after her bone marrow transplant.

However, since meeting you and starting the combination of anti-oxidants twice a day, since September 12th, she is a different person.

She has endless energy and keeps going with her activities all day and I now have to nag her to go to bed.

She is now able to enjoy a normal teenage life.

As we know her anti-oxidant levels have increased hugely, making her able to fight any “bad cells” and **that makes me as a mother, feel more confident that this time the cancer will not return.**

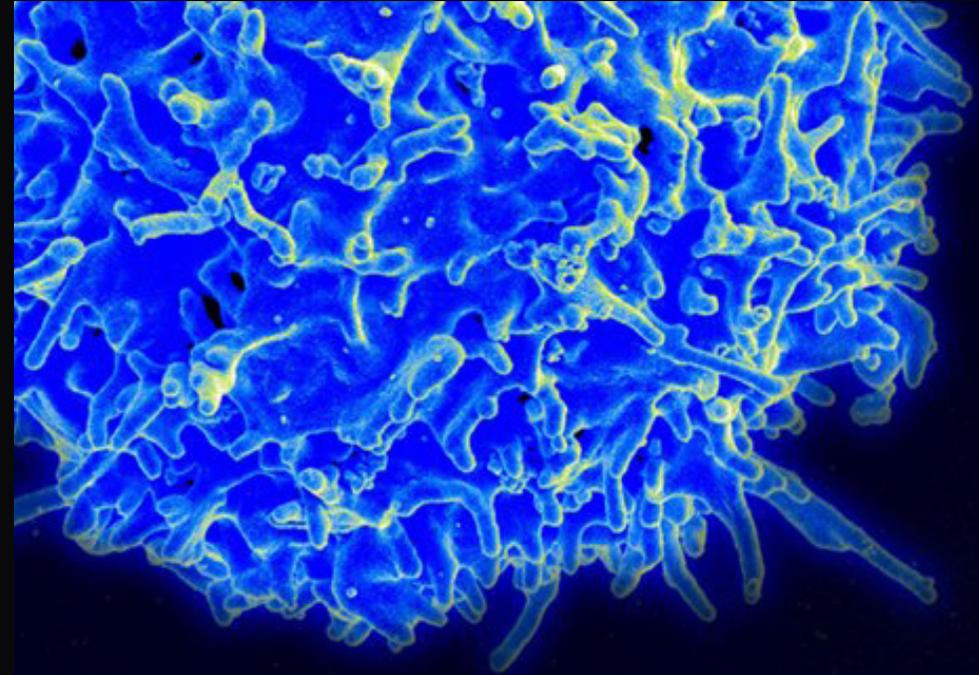

And with my oldest daughter, analysing her blood through microscopy and then able to tell her what problems she was having and advising her what supplements to take has been a huge help.

Your insight and information given about the findings after hand scanning and blood drop tests are fascinating and invaluable and have helped both my girls find solutions naturally to aid their lifestyles.

I thank you very much”.

Best Regards,

Karen Soffe. UK. November 2012

PETER'S COMMENT:

Watching the body actually change through microscopic viewing and electromagnetic scanning is a wonder to behold through the application of supplementation.

But of course the most rewarding thing is seeing people regain their lives.

What we do is increase the effectiveness of all other professionals work.
